USSR: The Soviet dual missiles displayed for the first time in the Moscow May Day parade are probably a new surface-to-air type for mobile use with field forces.

The Soviets have previously been reported to have developed a mobile SAM for protection of their field forces. On the other hand, preliminary analysis is not sufficient to exclude the possibility that the new missiles have a tactical surface-to-surface role.

The missiles, whose range is unknown, are mounted on a new assault chassis and are approximately 25 feet long. The launch mount apparently can be moved both vertically and horizontally.

The missiles are propelled by solid-fuel boosters and may have either a ram-jet or turbojet sustainer engine. None of the guidance equipment was shown in the parade.
